Android recovery mode not showing

Joy Taylor Last updated: Jun. 03, 2020 Android Recovery Mode comes to shut up numerous problems. If your device has been configured incorrectly or is frozen, entering recovery mode is a hassle to resolve this issue. It's even useful when it comes to clearing the cache partition or resetting the phone. Lately, many Android users have complained that their Android recovery mode does not open and finds recovery mode without command error by resetting their device and bringing the entire process to a standstill. The most common reason to find recovery mode without command error is when Superuser access has been denied or terminated during a reset or upgrade process. Additionally, tersing Superuser access while installing the Google Play Store may even cause this error. The good news is that there are some ways to get rid of Android recovery mode that doesn't work. So keep reading to learn two different ways to fix the error. To fix the problem you are experiencing, you can try any of the solutions below. Fix the recovery mode of Android Does Not Work problem by key combinations The easiest solution to fix huawei recovery mode does not work error is through key combinations. Before proceeding, make sure that you have ejected the memory card and SIM card from your device. Also, disconnect the phone from a charger, USB cable, or other connections, if any, and make sure your device's battery is at least 50% charged. Below is the step-by-step guide on how to fix the error using the right key combinations. Step one. Once you get a No command error on your device screen, try one of the following buttons at the same time for two to five seconds. Press and hold the Power up button and turn up the volume. Press and hold the Power button, the Home button, and the Volume Up button. Press and hold the Power up button and turn the volume down. Press and hold the Power button, the Home button, and the Volume Down button. Press and hold the On button and the Home button. While you try different key combinations, be sure to give a few seconds space between each attempt in order to give your phone some time to process the command. Step two. This key combination would probably resolve the error in Command as well as open recovery mode on your Android device. To resolve Android recovery mode Does not work Android recovery problem Recovery mode does not work by boot loop If the Android device is stuck in boot loop without displaying any command error, then this may occur due to improper software installation or device cache error. However, any of the following methods can solve it, but your phone has to be the first in Cleaning Cache partition This solution is easy and will not cost anything and, in fact, not also data loss. So you should give it a try at least once by following the steps below: Step 1. Press the Volume Down button to select the Clear cache partition option. Cache. 2. Press the Connect button twice to confirm the cache deletion. Step three. Use the Volume Down button and scroll to the option that says Device Reboot, and then choose it to restart the device. Clearing the cache partition can fix Samsung's recovery mode not working error, but if it does not help, try the following solutions. To fix android recovery mode does not work problem manually install the update if you think that no command problem is due to software update or when trying to flash a custom ROM, try the following steps: Step 1: Press the Volume Down button to select the application update from the cache option. Step 2: Press the Connect button to open the selection. Step 3: Choose the available software and hit the Power button to get it or install it. To fix android recovery mode not working problem via Manually install factory update Reset Android phone here comes the latest solution for everyone who likes to solve android recovery mode that does not work problem. Well, this method comes with a disadvantage and that is that it would erase all your android content and settings, thus ensuring to back up your device's data before proceeding. Step 1: Press the Volume Down button to go to the factory data/reset option. Step 2: Press the Power button to choose the option and start the process. Step 3: After the process is complete, the device will restart normally and set it back to use the device, just as you normally use it. To fix android recovery mode not working problem via Factory Reset Android Phone The bottom line it is it on how to get rid of Android recovery mode does not work problem.
